PROFESSIONAL SUMMARY

Middle iOS Engineer building and shipping production mobile products across telecom, banking, referral platforms, and independent App Store applications. Strong in SwiftUI and UIKit delivery, local-first data architecture, runtime workflow engines, refactoring, accessibility, security, and release execution. Effective at turning product requirements into maintainable features through close collaboration with product, design, backend, and QA teams.

CORE EXPERTISE

iOS Engineering: Swift, SwiftUI, UIKit, Foundation, SwiftData, Observation, Combine, async/await

Apple Frameworks: AVFoundation, PassKit, WidgetKit, SiriKit, CryptoKit, CommonCrypto, AppKit

Architecture & Data: MVVM, state management, offline-first persistence, REST APIs, Codable/JSON, modular components

Quality & Delivery: XCTest, Xcode, CocoaPods, Git, CI/CD, App Store Connect, TestFlight, Postman, Agile Scrum

PROFESSIONAL EXPERIENCE

Moldcell | Middle iOS Developer

Jun 2026 - Present

- Develop and maintain core journeys in a large customer-facing iOS application, including Lumo Family subscriptions, account management, and PassKit-powered Apple Wallet functionality.
- Contribute to refactoring legacy areas toward clearer boundaries, reusable components, improved maintainability, and safer releases.
- Partner with product, design, backend, and QA from refinement and estimation through testing and production rollout.
- Diagnose and resolve authentication, session, maintenance-state, phone-input, and reliability issues across production flows.

maib | iOS Developer

Dec 2025 - May 2026

- Designed and delivered an in-app feedback flow for the maibank application, capturing structured user input and contextual data for product and engineering teams.
- Collaborated with stakeholders to convert feedback themes into actionable user-experience and product improvements.

Extole | Software Engineer

May 2025 - May 2026

- Contributed production features to Extole's mobile referral product and reusable customer-facing modules.
- Coordinated with iOS, Android, product, and backend teams to deliver consistent cross-platform behavior and integration-ready functionality.
- Investigated production issues and improved mobile journeys across customer implementations.

Extole | Frontend Technical Support Engineer

Jan 2024 - May 2025

- Built and customized enterprise referral experiences using JavaScript, HTML, and CSS.
- Supported web and mobile SDK integrations, reproduced production issues, and translated customer requirements into engineering fixes.
- Worked across support, product, and engineering to resolve complex integration problems and improve implementation quality.

SELECTED ENGINEERING PROJECTS

FitKate - Native fitness coaching platform

SwiftUI · SwiftData · Observation · AVFoundation · CryptoKit · XCTest | [App Store](#) | [GitHub](#)

- Built and shipped an offline-first coaching app for managing clients, workout plans, exercises, media, attendance, coaching notes, and session history without accounts, tracking, ads, or a backend.
- Designed a workout compiler and session engine that converts HIIT, EMOM, circuits, station rotations, boxing rounds, stretching, breaks, and announcements into validated runtime phases with participant assignments, transitions, countdowns, and completion handling.
- Delivered multilingual voice and audio cues, haptics, accessible voice selection, and a large high-contrast timer UI; secured portable backups with PBKDF2-HMAC-SHA256 and AES-GCM and added XCTest coverage for compiler, persistence, and audio behavior.

SwiftBuilder - Native visual iOS prototyping platform

Swift · SwiftUI · AppKit · Foundation · Codable · Xcode command-line tools | [GitHub](#)

- Built a macOS no-code builder and companion iOS PreviewRunner for composing multi-screen prototypes, exporting SwiftUI source code, and validating designs on simulators or connected devices.
- Implemented 22 built-in components across 6 categories, contextual inspectors, JSON persistence, templates, undo/redo, device-aware previews, and multi-screen navigation.
- Separated shared models and rendering into SwiftBuilderComponents and automated build, install, project-data transfer, and launch using Xcode command-line tools, simctl, and devicectl.

Inpenso - Personal finance application

SwiftUI · SwiftData · WidgetKit · SiriKit · MVVM | [App Store](#) | [GitHub](#)

- Shipped an App Store expense tracker with budget management, spending analytics, home-screen widgets, and Siri shortcuts for fast expense capture.
- Structured the application around MVVM, local persistence, and privacy-first operation for expense, category, and budget workflows.

SilverLink - Hackathon-winning accessibility application

SwiftUI · Voice interaction · Text-to-speech · Accessibility-first design | [GitHub](#)

- Built a senior-focused SwiftUI prototype combining large high-contrast navigation, local news, photo sharing, messaging, and voice-assisted access to information.
- Designed simplified interaction patterns for users with visual, dexterity, or technology barriers; the project won 1st Place at the Moldcell Hackathon.

EDUCATION & RECOGNITION

Technical University of Moldova | Bachelor of Science in Software Engineering | Jun 2026

- Bachelor thesis: SwiftBuilder - MacOS Platform for Real-Time Visual Interface Prototyping for iOS Applications.

1st Place - Moldcell Hackathon | SilverLink, an accessibility-first communication concept for seniors | [GitHub](#)

Audience Award - UNFPA / Moldcell | A Kid's Place | [GitHub](#)

ENGINEERING VALUE

Product-minded engineer with hands-on experience across feature delivery, refactoring, debugging, accessibility, privacy, local persistence, release support, and cross-functional collaboration. Comfortable owning technically complex flows while keeping user experience and long-term maintainability in focus.
